

# PACKET-/OBJECT-HANDLING SYSTEMS

## Secure transfers of documents and other items for a safer welcome

Packet-/object-handling systems are integrated into counters or facades and provide the means to transfer documents, tickets, envelopes and packets between a secure area and an exterior area used by the general public. Packet windows enable larger items to be passed from one side to the other and because of the way in which they are designed, they offer protection against vandalism. Some models also provide bullet-proof resistance up to BR4 level, in accordance with the EN 1063 standards.

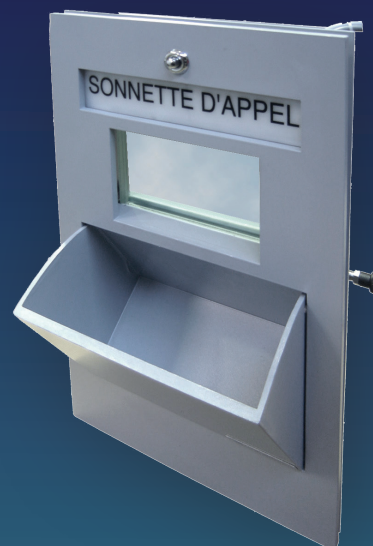

This model is for transferring documents, notes, coins and small items to a secure area and is designed to protect personnel against physical attacks. The Sebal PM2 is often installed in combination with the Parabal pay window.

## DO YOU KNOW?

### Other models in the packet-handling system range

- Sebal PM2 (vandalism proof)
- Rotapac ½ Gédéon BR4 (bullet-proof)
- Rotapac Gédéon BR4 (bullet-proof)

## Specifications

### Standard Pharmapac

- Protective block for transferring objects:  
Transfer compartment  
Spyhole with shutter  
Lighting with control box and circuit breaker  
Call button and backlit "call bell" wording
- Textured RAL 7042
- Use: indoors and outdoors
- Resistance: FB4 bullet-proof, not certified
- Delivered assembled

### Operation

- Drawer opening: manual once the locking system has been released
- In its closed position, the tiltable drawer is automatically locked in place

### Assembly

- Front-facing side installation indoors or outdoors (sheltered).
- The facade can be made of steel, masonry, concrete, ... and with a compatible thickness.
- Not compatible for installation in glazing.
- Given the device's weight, it is a good idea to add a support structure.

### Applications

- Pharmacies
- Retail

### Advantages

- Provides employees with physical protection
- Provides protection against drafts
- Space-efficient
- Can be integrated into doors
